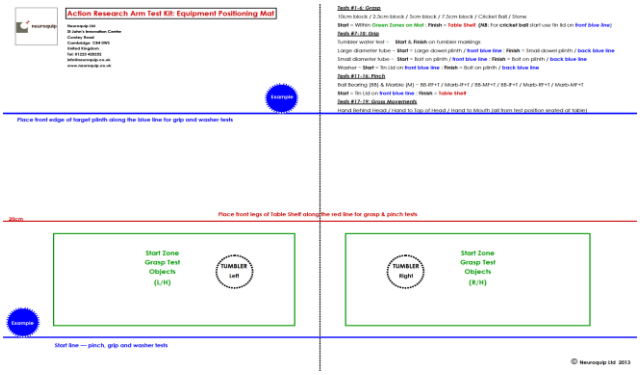
Action Research Arm Test Kit



Neuroquip's **'Action Research Arm Test Kit'** is effortlessly portable and supplied complete with all of the components and resources required to conduct a valid, reliable and reproducible outcome-measure assessment of upper-extremity motor status in accordance with established protocols.

Conducting an ARAT test has *never been easier* as Neuroquip's unique, waterproof, folding textile equipment layout mat is helpfully printed with recommended positions and a guide to the correct sequence for performing each element of the Test.

Your ARAT test equipment organises neatly in a bespoke, compartmentalised shoulder-bag. The table-top shelf component stores folded in the holdall base.

Each Neuroquip ARAT kit is manufactured in the UK. All components are available individually if lost or damaged and they meet all relevant British and European standards of construction. For control of infection, porous parts are coated with an advanced, strong antimicrobial varnish. All other parts can be disinfected using standard clinical antibacterial cleansing materials.
